10. REGULATORY INFORMATION

* Crystalline silica is categorized as a Class 2A carcinogen. A class 2A carcinogen is one in which there is limited evidence for carcinogenicity in humans and sufficient evidence for carcinogenicity in animals. Long term exposure to respirable silica may produce pneumoconiosis in susceptible persons or aggravate pre-existing respiratory conditions.

California Proposition 65: W A R N I N G: This material contains trace amounts of chemicals known to the State of California to cause cancer.
